Sources: national databases; data gathering and calculation by GÖG

Calculation of Euro for Non-Euro-Countries with rate of ex-change from February 2015

Note 1: Pharmacy purchase prices are not available for CH and CZ.

Note 2: Pharmacy retail prices are not available for NL, MT, SI and UK, because prices may vary throughout these countries (e.g. depending on the region or the patient)

Note 3: The pharmacy retail price (AVP) is valid only for the DP and LTI pattern.

A standard PPI query contains, besides the pharmacy retail price as shown here, the manufacturer/ex-factory price and the net pharmacy retail price.
