Sources: national databases; data gathering and calculation by GÖG in the framework of the PPI (Pharma Price Information) service

NL, SI and UK: Due to performance based pharmacy remuneration the PRP is not known in these countries.

CZ: Due to the remuneration scheme for distribution actors there is no common country wide PPP in these countries.

DK, NL and UK: Pls. note that in these countries the manufacturer price is computed via average wholesale mark-ups/margins therefore slight deviations may occur.

AT: Only private customers (who account for approx. 30% of pharmacy sales) pay the PRP, the sickness funds (which account for 70% of pharmacy sales) pay a significantly lower price, the so-called reimbursement price ("Kassenpreis").

HR: Pharmacy remuneration equals a dispensing fee based on the assumption of 1 pack of that medicine on the prescription

IE: For reimbursable products no pharmacy markup is added to the PPP, however, a dispensing fee is applied by the pharmacy.

IT: Price data are indicated taken in account the statutory manufacturer discount imposed by national law.

Notes

- PRP gross pharmacy retail price incl. VAT (discounts, clawbacks, etc. are not accounted for)
- PRP net pharmacy retail price excl. VAT (discounts, clawbacks, etc. are not accounted for)
- PPP pharmacy purchasing price without VAT (discounts, clawbacks, etc. are not accounted for)
- Ex-fact manufacturer selling price without VAT (discounts, clawbacks, etc. are not accounted for)
- n.a. price is not available
- H Product is only or mainly dispensed in a hospital setting
