Sources: national databases; data gathering and calculation by GÖG in the framework of the PPI (Pharma Price Information) service

Calculation of € for Non-Euro-Countries with exchange rate from January 2022

NL, SI and UK: Due to performance based pharmacy remuneration the PRP is not known in these countries.

CZ: Due to the remuneration scheme for distribution actors there is no common country wide PPP in these countries.

DK, FI, NL, SE and UK: Pls. note that in these countries the manufacturer price is computed via average wholesale mark-ups/margins therefore slight deviations may occur.

AT: Only private customers (who account for approx. 30% of pharmacy sales) pay the PRP, the sickness funds (which account for 70% of pharmacy sales) pay a significantly lower price, the so-called reimbursement price ("Kassenpreis").

HR: Pharmacy remuneration equals a dispensing fee based on the assumption of 1 pack of that medicine on the prescription

IE: For reimbursable products no pharmacy markup is added to the PPP, however, a dispensing fee is applied by the pharmacy.

Notes

PRP gross	pharmacy retail price incl. VAT (discounts, clawbacks, etc. are not accounted for)
PRP net	pharmacy retail price excl. VAT (discounts, clawbacks, etc. are not accounted for)
PPP	pharmacy purchasing price without VAT (discounts, clawbacks, etc. are not accounted for)
Ex-fact	manufacturer selling price without VAT (discounts, clawbacks, etc. are not accounted for)
n.a.	price is not available
H	Product is only or mainly dispensed in a hospital setting
MAH	Marketing authorisation holder
HSE	Health Service Executive (=national health service)
NHS	National Health Service
